

Overview of the Annual Performance Report Development:

Same process as described in Indicator #1.

Monitoring Priority: Early Intervention Services In Natural Environments

Indicator 2: Percent of infants and toddlers with IFSPs who primarily receive early intervention services in the home or community-based settings.

(20 U.S.C. 1416(a)(3)(A) and 1442)

Measurement: Percent = [(# of infants and toddlers with IFSPs who primarily receive early intervention services in the home or community-based settings) divided by the (total # of infants and toddlers with IFSPs)] times 100.

FFY	Measurable and Rigorous Target
FFY 2011	87 %

Actual Target Data for FFY 2011: 93 percent (4503/4850)

The Arizona Early Intervention Program (AzEIP) used the Table 2, Program Setting data reported to OSEP on February 1, 2011 in calculating the percentages reported here. The report includes setting data for all children reported on Table 1, Report of Children Receiving Early Intervention Services in accordance with Part C for 2011.

Calculation used: Home + Community-Based / Total = Actual Target Data. [(4480 Home + 23 Community Based)/4850]

In FFY 2011 the percentage of children reported receiving early intervention services primarily in the home or community increased from 86 percent to 93 percent of all children, while the percentage of children reported as receiving early intervention services primarily in “other” settings declined from 14 percent to 7 percent. These results are attributed to the changes made in data collection, review and reporting procedures.

Discussion of Improvement Activities Completed and Explanation of Progress or Slippage that occurred for FFY 2011:

The state met its targets: no explanation of progress/slippage or discussion about improvement strategies required.

Revisions, with Justification, to Proposed Targets / Improvement Activities / Timelines / Resources for FFY 2012

None
